

CCTV

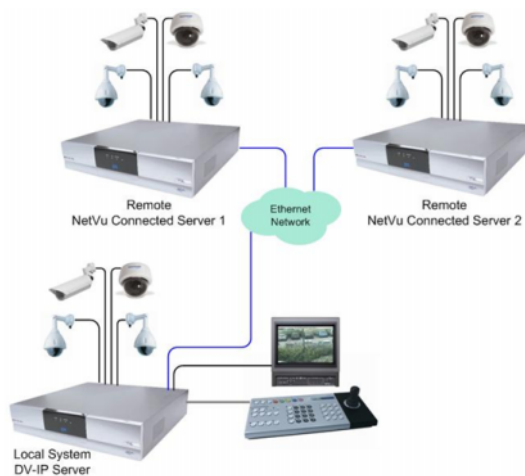

JMH were approached by a local authority that needed help to efficiently monitor the CCTV systems they were using in the entrances of residential tower blocks. JMH reviewed the current systems and prepared a plan to upgrade parts of the system and install broadband connections so the recorded footage could be reviewed remotely; this had an immediate benefit in terms of cost and efficiency meaning that:-

Local authority staff did not have to leave the office to know that the system and cameras were operational and that no vandalism had taken place.

Staff are no longer put in vulnerable situations on site to download video footage as this can now be done remotely

Police are now able to view live footage of incidents taking place allowing them to assess a situation more efficiently and effectively.

Embedded NetVu Console

Using the Embedded NetVu Console, an Operator can view and control the locally connected cameras

AND the cameras connected to Remote Server 1

AND the cameras connected to Remote Server 2

AND more - All as if they were in one continuous system
